

Don't take our word for it...

Here's what the **EXPERTs** are saying about **DFit**.

*"The probability of liquid or other condensed vapor accumulation getting trapped within enclosures or conduit systems has been a problem for installers for a long time. Denny's patented technology will make it **so much easier** to install, **with less of a worry** and less need to modify the existing space. I am surprised that this is not available on the market yet. I would be the first buyer of these fittings if someone manufactures them."*

- Nilesh Patel, Structural Fabricator at World Fuel Services
20 years in the oil & gas industry

*"DFit is a **win** for installers, distributors and of course, the owners. It's going to change order demands from my clients and I cannot wait to be able to offer it."*

- Kolt Ferguson, Strategic Account Manager at Crawford Electric Supply
12 years in the electrical sales & supply

"These are pretty slick. I could find a use for these in conduit parallel runs due to tight spacing and not having to use all the form 7 fittings covers and reducers. If these are made in trade size conduits and can adapt to flex right from that drain fitting. I believe it would be a game changer if he can get those UL listed and would be a use for them in all types of electrical installations. Well done!!! I'm a fan!!!"

- Kim Gutierrez, Project Controls Supervisor on behalf of Niles Frazier, I&E Inspector
Specializing in Engineering and Construction, Major Projects – Gas Plants

*"Imagine being able to use fewer retrofitted drain fittings. This is, by far, the single most important and innovative game changer to I&E construction in decades. This fitting will provide a cost and time saving **revolution**."*

- Douglas Kirk, Department Manager at Optimized Process Design
40 years in electrical engineering, construction & PM

*"As Leonardo da Vinci stated in the 15th Century; "Simplicity is the ultimate sophistication." In this respect, the DFit Drain's sophisticated design derives from its simplicity. The simplicity of the DFit drain is at the heart of the **huge savings** it provides installers in both material costs and the labor required for its installation. Unlike the costly collection of seven component parts required to install a traditional conduit drain, the three parts of the DFit drain are incorporated into a single product that provides **superior performance and durability** while consuming less than a third of the space required for a traditional conduit drain. In the final analysis, it would be a foolish and wasteful installer who would willingly employ a traditional conduit drain over the unparalleled benefits of the DFit drain."*

- Chris Peirce, System Designer at Controls, Suppression & Protection Inc. (CSP, Inc.)
35+ years in the oil & gas industry

"DFit is a drain fitting that will compete against T&B and others. Congratulations on your project!"

- Don Trammell, Director of Sales and Marketing at American Connectors
10 years in cable connectors for international energy markets

"Have you ever worked with 2-inch TB bodies? They weigh as much as a sack of potatoes. So, when you've got to install 20+ on a job you feel it. The DFit equivalent is light enough and compact enough to be easily held in one hand. That alone is a win for my clients. Not to mention, pulling cables is a nightmare. If on every job my clients could have one less pull location, it would save them time, money, and their sanity. This DFit, isn't going to help with just one pull, it's going to help with thousands of pulls.

Look, gas plant builds is what I know best. I've supplied clients who've ran cable for more jobs than I can count. The one thing I will tell you is every one of them was a push for faster completion. These guys want those plants, factories, whatever it is, up and running ASAP. So, for my client's sake and to please these Goliaths, Denny's part would be a real game changer."

- Kevin Colpoys, Industrial Sales Manager
40 years in electrical engineering, construction & PM
